AUSTROFLAMM

Fire is the source philosophy of every- thing.

FERDINAND HUEMER,
A MULTIFACETED INNOVATOR.

At the beginning of the 80s, Ferdinand Huemer recognised the need to free wood-burning stoves from their somewhat outmoded image. His declared aim was to develop stoves that would not only provide cosy warmth but would also revolutionise design and efficiency - and founded Austroflamm. By March 1983 he had already begun to supply the first stoves. The company grew rapidly and moved to a new building in 1994, particularly as it was now exporting to Australia and Japan. One year later Austroflamm launched the first pellet stove on European soil - one of many other innovations that were to follow.

This is the entrepreneur, who with a blend of creativity, zest for action, courage and determination transformed his company into the market leader. Then there is the musician Ferdinand Huemer who plays several instruments, composes and writes – one of his

most recent projects being "Masita" - and manages the "Nest" recording studio as a producer. And finally there is the farmer who enjoys an egg for breakfast each morning straight from his own chickens.

What unites these three lifestyles is not only the name and the identical face behind them, but above all one characteristic: passion, expressed through complete commitment and sheer determination to achieve every goal he has set himself.

There is no question about it: Ferdinand Huemer has dedicated his life to fire and human warmth.

What matters most: passion, partnership,
team spirit and human warmth.

The Austroflamm COMPANY PHILOSOPHY is inseparably linked to its founder and owner Ferdinand Huemer. His esprit, his passion for innovation, his visionary thinking and actions are reflected in the way in which the company has evolved. The enthusiasm for unconditional quality and exceptional design is also evident in his employees, leading time and again to trendsetting technological developments.

Austroflamm is THE PIONEER in the use of ceramic, developing innovative types of storage materials such as HMS (Heat Memory System), XTRA stored heat and the in-house developed and produced Keramott – and has thus been crucially involved in having significantly reduced the emission values of combustion products for solid fuels in the last 25 years.

Austroflamm is constantly setting new standards in the industry. Sustainable thinking and acting, team spirit and partnership distinguish the company in its dealings with customers, but also within the team.

Our guiding principle is respect for others because ultimately,
what really matters in life is human warmth.

Teresa Huemer

Design is our love,
Function our life!

CESARE MONTI, Italian architect and designer. After studying architecture at the Polytechnic University of Turin, he received numerous prizes and awards, including the International Catas Award of 2006 and 1st prize at the Torre Littoria Competition in Turin in 2011. Via Salzburg, he found his way to Linz, where he designs stoves in his studio exclusively for Austroflam.

Our only teacher must ever be Nature.

Cesare Monti

When I conceive my projects I always try to create a game of opposites.

Life and emotions, as well as architecture, are born from a contrast between opposites. Dynamism originates both from static and moving components, as well as the contrast between one side in light and the other side in shade, shade producing the forms and our perceptions of objects. Masculine and Feminine, Full and Empty, Warm and Cold, Lightness and Weight. Nature and Artifice.

A low-angle shot looking up at a red hot air balloon basket. The burner is firing, creating a large plume of orange and yellow flames. An Argentine flag is attached to the side of the basket. The background shows a hazy landscape under a cloudy sky.

For us, *innovation*
is more than just
hot air.

NEW
Air+

Air+ control - your heating butler

EASY & SMART!

WITH FIREBOX TEMPERATURE SENSOR AND AUTOMATIC CONTROL!

Your Air+ controller automatically regulates the air supply after heating up!

- **CONVENIENT:** Fully automatic control of the damper doors for optimum combustion values.
- **ECONOMICAL:** Stops the supply air after combustion and keeps the heat in the stove for a long time.
- **SAFE:** Manually adjustable without tools in the event of power failure.

Heidi BACK, Kylie XTRA, Sina & Sina XTRA → optional with Air+

+ FREE Air+ APP (coming soon)

- various statistical data can be called up
- the current status of the stove is displayed
- information on the optimum time to stoke

A white ceramic cup filled with dark coffee sits in the center of the frame. The cup is surrounded by a thick, grey, textured knitted blanket that is draped over it. The background is a blurred, light-colored surface, possibly a table or a wall. The overall mood is cozy and warm.

We *keep*
energy *warm*
for a long time!

The sparkling ideas for XTRA a lot of warmth

- 1.) HEAT MEMORY SYSTEM
- 2.) XTRA HEAT STORAGE

1

A MATERIAL WITH OUTSTANDING STORAGE PROPERTIES. With the Heat Memory System, Austroflam has developed a very heavy material (specific weight above 3!) that is particularly effective at absorbing and releasing heat over a long period of time. It goes without saying that this material is patented.

Heat Memory System:
Panels

INSTALLATION OF THE MEMORY MASS

Equally as important as the storage material itself is its installation. The storage mass must be placed as close as possible to the heat source, i.e. the firebox of the stove. If the storage material is only used as the outer cladding of a stove (for example as a cover plate), then simply not enough energy will reach the material. For this reason, Austroflam also packs the storage mass into the oven. It goes without saying that this method of installation has also been patented.

2

Xtra

WHAT IS PROBABLY THE BEST HEAT MEMORY STORAGE is a further development of the proven Heat Memory System: We combine the Heat Memory System with a special heat exchanger, pack more than 100 kg of it into the stove and equip it with adjustable convection air that can even be shut off. The system is ready to store heat for up to 12 hours!

Tower Xtra 2.0 without
cladding and with a heat
storage capacity of 130 kg.

We have an *eye*
for *sustainability!*

Clean Combustion for a green future.

Keramott
firebox lining

KERAMOTT

STATE-OF-THE-ART WOOD-BURNING STOVES require not only creative design ideas but also enormous development efforts in the field of combustion technology. A significant example of this is the firebox lining: In all Austroflamm stoves these important elements are manufactured from Keramott.

Keramott has been specially developed and is available exclusively from Austroflamm. The material is characterised by a special ratio between thermal insulation and thermal conduction, which enables high temperatures in the firebox to be reached more quickly. Only this ensures that combustion is "clean" and low in harmful emissions. The material is highly heat-resistant up to approximately 1,200 °C. In addition, the firebox can also "burn itself clean", the lining absorbs less soot than comparable materials and remains pleasantly light. This effect is also enhanced by the surface structure of Keramott.

COMBUSTION TECHNOLOGY

We make every effort - more than we are required to. Throughout most of Europe, the limit values of German Industrial Standard EN13240 must be complied with for domestic heaters. Unfortunately, however, these limit values are easily satisfied and only encompass 2 parameters. The DIN Plus specification is much stricter, and is sometimes required at a regional level. Stricter limit values have to be observed for a set of 5 different values. Since several different emission values are interrelated, the requirements are much higher than those of the European standard, which only takes CO emissions into account.

LIMIT VALUES IN ACCORDANCE WITH EN 13240 AND DIN PLUS

BONO XTRA PURE PLEASURE

FOR PURISTS

Actually, Bono should be called "BUONO" (Italian for good), although "good" would be a slight understatement. "Perfect" is certainly the most fitting description for this all-rounder: ideal heat output for small rooms or even low-energy houses, a panoramic view of the dancing flames and a simple, TIMELESS DESIGN makes Bono Xtra a perfect storage heater for any room and for many years to come.

The soapstone cover (rear connection) of Bono Xtra with lockable convection air vents.

Neatly concealed: behind a panel are the ash pan, the riddling grate actuator and the controls for primary and secondary air.

Complete range of fittings: Bono Xtra with soapstone side panels (60 mm thick), soapstone cover and plenty of heat storage.

BONO
XTRA

CLOU XTRA A ROUND AFFAIR

The wood box echoes the design of the round cast-iron door.

FOR LOVERS OF FORM

A GENUINE HIGHLIGHT for everyone who is looking for something completely different: round doors, oval body and a large door handle made of elegant wood to create an extraordinary blend that is certainly not to be found in every living room. Equally special, though not unusual for Austroflam models, is the fantastic Xtra heat storage system for up to 12 hours of heat retention.

Another striking feature of Clou Xtra: its shallow depth.

Elegant grain of the wooden handle

- XTRA heat storage - particularly economic

CODY OUR CENTREPIECE

FOR FIRE WORSHIPPERS

Doesn't every home deserve a centrepiece? Cody, our new member of the family with its impressive firebox, is happy to occupy this place despite its compact design. The large cast-iron door with its curved glass pane provides a view of the crackling fire. And no matter whether ceramic or steel panelling, whether pedestal with a large wood compartment or pure fireplace stove - this show-piece simply WARMS YOUR HEART.

C O D Y

Pictured right: Dexter 2.0

IVY FLAMES WITHIN A FRAME

EVERGREEN FOR INDIVIDUALYSTS 2.0

The linear design with its square base loses its hardness thanks to the rounded corners, but not its distinctiveness and elegance. With a wide range of options for enhancement, Ivy becomes more than just a fireplace, it becomes a piece of furniture and an eye catcher, combining functionality with form. The glass inserts on three sides provide a direct view of the flames, literally serving as their frame.

A view into the fire from three sides. A lot of space for firewood and even more: Ivy 2.0 with a plinth box, side boxes and log drawers.

JINI
XTRA

JINI
ANYTHING BUT ORDINARY

JINI / JINI XTRA

Inviting, casual, timeless and snug. With clear lines, simple shapes and perfect proportions, Jini XTRA appeals to everyone who likes an uncomplicated and relaxed life. Extremely sophisticated in terms of combustion technology, it is not only a long-lasting design classic, but also a premium-quality heat source guaranteed to make you feel good. Large-format fire naturally included with up to 12 hours of stored heat!

No more bending down:
The air regulator is positioned at
a comfortable height just below
the top plate.

A wooden door handle
that's a pleasure to hold.

KOKO A MODERN CLASSIC

KOKO 2.0

Koko 2.0 with soapstone warming compartment

A MODERN CLASSIC - the “little black number” of our collection so to speak: simple, timelessly elegant and guaranteed to be the perfect choice for every occasion and every environment. A matching pedestal is also available on request. The large rounded glass pane offers a maximum view of the flames and the warming compartment helps to prolong those wonderful hours spent in front of the stove with tea or punch. Koko XTRA 2.0 features a wealth of heat storage in place of the warming compartment.

KOKO XTRA 2.0

Handle and air controller as an elegant combination of stainless steel and wood.

KYLIE

XTRA

KYLIE XTRA

TIMELESSLY BEAUTIFUL, Kylie Xtra is the ideal complement to every room and personal lifestyle. With its basic conical shape, it tapers towards the back and therefore fits particularly well into corners. The material combination plays with contrasts: The classically robust cast-iron door and soft, finely crafted wooden elements elegantly round off the overall picture. And so that the flames always blaze away to perfection without you having to contribute anything, we have developed the Air+ automatic air control (accessory).

The practical wood storage compartment is concealed behind a panel.

The convection air outlets in the cover can be regulated.

LOUNGE

XTRA

A FIRE IN WIDE-SCREEN FORMAT
THE NEW XTRAVAGANCE

LOUNGE XTRA

The flat screen among our stoves! Gazing at the lounge becomes more captivating and much more relaxing than watching TV: fire in truly wide-screen format. Despite its size, the shallow depth lends the lounge a slim and extremely elegant silhouette. And the unique Xtra heat storage system is on board right from the start.

LUCY
COOK

LUCY COOK - 2 STOVES IN ONE

The head chef's recommendation: delicious dishes, prepared with Lucy Cook. The large, full-surface cooking plate offers maximum flexibility for large and small saucepans. And even if you only want to use Lucy Cook for warming up and dreaming, then this is also the ideal solution for you. After all, once the saucepans are removed, you would never know she had a passion for cooking.

You can cook with Lucy Cook, but you don't have to. Even as a traditional stove, its charm will captivate you.

The solid cast-iron door emphasises its robust appearance.

There is space for plenty of saucepans on the cooking plate (46 x 46 cm).

L U X

LUX
A DELUXE ITEM OF FURNITURE IN ITS OWN RIGHT

LUX COMES FROM THE LATIN FOR LUXURY

If you like ROUND SHAPES, then Lux is the perfect choice for you! The circular base and huge curved glass pane show you the play of flames in a wide format. With side boxes that can be attached on the left and right, you can expand Lux to create your own individual furniture system. Practical and beautiful for home accessories, throws, magazines and everything you need for a sense of well-being at home. The wooden handle and pedestal emphasise its warm character and transform the individual attachments into a visual unit.

Pictured left: already an elegant classic: Lux with top box and large side box and two wooden drawers.

Small side box left and right and wooden drawer.

PALLAS IN THE FOOTSTEPS OF TRADITION

PALLAS / PALLAS BACK

Fancy a romantic chimney fire, a cup of tea and perhaps something to eat as well? Pallas makes it possible! It's not only a charming heat dispenser with its cast-iron hotplates, but with Pallas Back the most delicious meals can also be prepared thanks to the additional baking compartment. Its classic country house style design make it the perfect accompaniment for the combined kitchen and living room, second home or weekend house.

UNO XTRA ONE LIKE NO OTHER

Uno Xtra with soapstone cladding and top plate, and adjustable convection air vents.

The ashes are disposed of the traditional way using a riddling grate and ash pan.

UNO XTRA

A real giant when it comes to heat output because the Uno Xtra is equipped as standard with the exclusive Xtra heat storage system, which provides up to 12 hours of storage capacity. The Uno is also big in terms of design, regardless of whether in steel, soapstone case or ceramic case. Its soft curvatures simply flatter every room. Round, practical, good

U N O

X T R A

W I E N

HAVE YOU SEEN VIENNA BY NIGHT

WIEN

The Renaissance of cast-iron. The oldest stove material can also be interpreted in a contemporary way: that's just typical of Austroflam! And we've even included modern firing technology into the bargain.

The separate side door is particularly practical for adding long pieces of wood to the fire.

The ash pan is integrated into the front.

COLOURS / FINISHES

Our stoves are available in a truly extravagant range of ceramic, stone and steel claddings. Many ceramic colours allow you to tailor your stove to your individual home decor. Especially since the complete colour range (see above) is available for all ceramic parts - no matter which type of ceramic or stone stove you choose!

The different ceramic glazes are also remarkable: gloss or satin, in elaborate wipe technique or with a stony structure - the choice is yours!

All ceramic glazes are the result of chemical reactions that cannot be influenced. For this reason, colour deviations are quite common and cannot be considered a flaw. Even fine hairline cracks (craquelure) are part of the natural appearance of all glazed ceramic surfaces. In this sense, each ceramic part is an appealingly unique piece.

Our natural stone cladding in soapstone is also a natural product that is made so unique precisely by small deviations in colour and structure. We have tried to reproduce the colour tones as true to the original as possible.

Should you nevertheless notice any discrepancies, then these are due to deviations in printing technology, and to the natural variations in colour of the ceramic glazes or of the steel claddings.

Technical and visual modifications and typographical and printer errors reserved.

A woman with dark hair tied back, wearing a white long-sleeved shirt and a dark vest, stands in profile on the right side of the frame. She is looking out over a calm body of water towards a range of mountains in the distance. Some of the mountain peaks are covered in snow. In the lower-left foreground, a campfire is burning brightly, with orange and yellow flames. The sky is a pale, overcast grey, suggesting dusk or dawn. The overall mood is peaceful and contemplative.
